Instruments – Optimization – Customization - Repairs

September 2023 US Pricelist

Good instruments are not found. They are made!

Initially, we handpicked instruments from an extensive factory collection, thinking we had chosen the best. However, we realized we were merely selecting those with the fewest issues, overlooking many potential treasures.

Our growing expertise and the development of new methods allowed us to pinpoint imperfections and master techniques to correct them. We understood that truly remarkable instruments aren't discovered; they're crafted, and musicians have different requirements and preferences needed other solutions.

Minor tweaks here and there could not guarantee consistency and perfection. This led to developing the 3 LP Set-up, where every instrument systematically will be optimized, including a complete re-padding and delicate balancing. We've also significantly elevated their durability and longevity, resulting in an extended 3-year warranty for all LP-optimized instruments. While individual instruments still possess unique attributes, your choice is now grounded in their inherent qualities, unclouded by nuisances like leaks.

All the optimization techniques are also available for your instrument.

1. For fast response and a very alive sound experience, we recommend the [L&P Pro-Setup](#). Its perfect seal guarantees a quick, fast, easy response, greater reliability, and excellent tonal focus. Increased playing comfort, light finger action, sensitive touch, and a stable intonation add to the pleasant experience. The sound is alive and responsive. The **3-year warranty** is included.
2. If you prefer very quiet pads, a dark and homogeneous sound for studio recordings, chamber music, and anywhere an undisturbed resonant sound is required, we recommend the [LP Studio-Setup](#). It offers Super quiet action, greater reliability, amazingly even scale, increased playing comfort, darker and warmer tone, reduced maintenance costs, totally water resistant and vegan L&P Studio 3-year warranty
3. This [L&P Soloist Set-up](#) is perfect for players who need quiet pads and mechanisms, the fastest response, and resonant sound. In critical or often changing climatic conditions, the instrument will work reliably. No binding or rattling keys anymore. It is available with the LP Pro or Soloist set-up and adds a ball-bearing enhanced mechanism.
4. Some players might benefit from a closed key or [L&P Plateau system](#). You can either partially or fully convert your instrument to plateau keys or exchange it for one of ours.

The set-up you choose is a matter of personal preference. The price difference does not reflect a different quality but the extra hours of work involved.

How to pair A and Bb clarinets

When selecting an A clarinet, opt for one with a playing resistance similar to the Bb clarinet. This enables you to play on the same mouthpiece on both of them with equal comfort. You don't need the same model just an instrument with a matching bore.

The resistance is influenced by the instrument's bore diameter, which tends to be larger in older clarinets. This enlargement, often due to swabbing, can make the clarinet sound sharper and more open while simultaneously reducing its resistance and focus.
